QuickGift — Integrations & Remaining Work

Last updated: 2026-10-28

This is the single reference for every external service QuickGift depends on, what's wired vs. still needed, and the outstanding work. "Scaffolded" means the code is in place but the service isn't funded/configured yet.

---

1. Third-party services

Live / active

Service	What it does	Account	Cost	Notes
GitHub	Source control	`iamlekside2/QuickGift`	Free	`master`/`main` auto-deploys
Render	Hosts the backend API (`quickgift-node-api.onrender.com`)	—	Free tier	Free tier **cold-starts** (~30s) and can pause after long idle; a pinger keeps it warm. Upgrade to Starter (~$7/mo) for always-on.
Supabase (Postgres)	Production database	—	Free tier	Managed Postgres; backend talks to it via raw SQL (no ORM).
Vercel	Hosts the **landing** (`www.quickgift.ng`) and **admin** (`admin.quickgift.ng`)	—	Free	Auto-deploys on push to `main`.
WhoGoHost	Domain registrar + DNS for `quickgift.ng`	horllyk12@gmail.com	Paid (domain)	DNS managed here (Brevo + Zoho records live).
Brevo	Transactional **email** — waitlist confirmations, admin alerts, user order/booking/dispute updates, welcome, and **email OTP**	horllyk12@gmail.com	Free (300/day)	Domain `quickgift.ng` is authenticated (SPF/DKIM). Sends from `admin@quickgift.ng`. **SMS is paid**, not used.
Zoho Mail	Real inbox for `admin@quickgift.ng` (receives admin alerts)	horllyk12@gmail.com	Free (Forever Free)	MX/SPF/DKIM in WhoGoHost; webmail at mail.zoho.com.
Expo / EAS	Mobile app builds (Android APK / future iOS)	`leksitech`	Free tier	Project id linked; `preview` profile = APK, `production` = AAB.

Scaffolded (code ready, not yet active)

Service	What it would do	To activate	Cost
Termii	**SMS** OTP + SMS to phone-only users	Create account, register sender ID, set `TERMII_API_KEY` in Render, set `DEBUG=false`	Paid per SMS (~■2–4)

Service	What it would do	To activate	Cost
Paystack	Payments (orders/bookings)	Add **live** keys (`PAYSTACK_LIVE=true` + live secret); live needs CAC/business activation	% per transaction
Cloudinary	Image uploads (product photos, avatars)	Set `CLOUDINARY_*` keys in Render	Free tier available
Kwik	Delivery dispatch	Set `KWIK_EMAIL`/`KWIK_PASSWORD`, `KWIK_ENV=live`	Per delivery
Expo Push	Push notifications	Works once the app is built & installed (token registered on login)	Free

---

2. Backend environment variables (Render)

Var	Purpose	Status
`DATABASE_URL`	Supabase Postgres connection	**Set**
`SECRET_KEY`	JWT signing / seed secret	Set (generated)
`DEBUG`	`true` returns OTP in-app (beta); set `false` for real OTP delivery	Currently **true** (beta)
`BREVO_API_KEY`	Brevo email sending	**Set**
`MAIL_FROM_EMAIL` / `MAIL_FROM_NAME`	`admin@quickgift.ng` / `QuickGift`	Set (in render.yaml)
`ADMIN_NOTIFY_EMAIL`	Where admin alerts go (`admin@quickgift.ng`)	Set (in render.yaml)
`GIFT_COMMISSION_PERCENT` / `BEAUTY_COMMISSION_PERCENT`	10% each	Set
`PAYSTACK_*`	Payments	Test only
`TERMII_API_KEY` / `TERMII_SENDER_ID`	SMS	Blank (sender `QuickGift`)
`CLOUDINARY_*`	Image uploads	Blank
`KWIK_*`	Delivery	Test env, blank creds

---

3. Email system (fully live)

Email	Trigger	To	Channel
Waitlist confirmation	Join at quickgift.ng	the signup	Brevo
Admin alert	New order / booking / provider application / waitlist / dispute	`admin@quickgift.ng` (Zoho inbox)	Brevo
User transactional	Order/booking/dispute/payment/ status updates	the user (if they have an email)	Brevo
Welcome	Sign-up with email	new user	Brevo

Email	Trigger	To	Channel
OTP (email)	`send-otp` when an email is known	that email	Brevo (free)

All free. **Phone-only users** still can't be messaged until Termii (SMS) is funded.

---

4. Status

Done (this build)

- Admin **create / edit products** (`POST` + `PATCH /admin/products`) — working.
- Admin **delete users and products** (single + bulk) — working.
- Users **"Export"** button → CSV download — working.
- **Email collection** at sign-up + profile — done (so email OTP + transactional emails reach users who add an email).
- **Cloudinary** image uploads — keys configured in Render.
- **Paystack** — business **activated (Live / Pre-Approved)**; the **live secret key is added** to Render. App is still safely on **TEST** (`PAYSTACK_LIVE=false`).
- De-whitened admin UI, real logo, modern edit modals.

Still to do

- ■ **Go live on Paystack** — change `PAYSTACK_LIVE` from `false` to `true` in Render when ready for real charges.
- ■ **Termii SMS** — fund + set `TERMII_API_KEY`, then `DEBUG=false`, so phone-only users get OTP and phone waitlist signups can be reached (SMS is paid).
- ■ **Kwik** live credentials — real delivery dispatch.
- ■ **iOS build** — needs an **Apple Developer account** ($99/yr) + TestFlight.
- ■ **Render Starter plan** (optional) — removes free-tier cold starts for production.
- ■ Re-seed demo data (optional) — the catalog + demo providers were cleared for go-live.

Mobile

- **Android** `preview` APK built on EAS (production backend baked in).
- **iOS** blocked on the Apple Developer account above.
